e-solarPRO

AFFORDABLE | SIMPLE | EFFICIENT

OZROLL IS PROUD TO PRESENT **e-solarPRO**

The Modular Solar Drive System

- Fast and simple installation - no drilling
- Environmentally friendly
- Renewable energy
- No electricians required
- Remote operation
- 5 year guarantee on motors
- Powerful LiFe PO4 battery
- **ONLY REQUIRES 1 HOUR OF DIRECT SUNLIGHT PER DAY!**

OZROLL

We Simply Do It Better

e-solarPRO - Premium Solar Automation for Roller Shutters, Outdoor Blinds & Awnings

The e-solarPRO consists of a sleek, preassembled module which collects energy from the sun by accepting charge through a solar panel while storing the energy in high performance LiFePO4 batteries which are located in the command centre at opposite end of the module.

The command centre incorporates not only the batteries but also an intelligent printed circuit board and a radio frequency receiver, which allows communication with a remote control.

The e-solarPRO is designed to work in conjunction with other members from the E-Series range, including Ozroll's T-Series 12 Volt tubular motors and E-Trans hand held remotes.

Installation is as simple as connecting the two female terminals, from Ozrolls T-Series motor range, to the two male E-Solar Pro terminals, then fixing the e-solarPRO module to the exterior of the application using unique 'click and go' clips, which make not only the installation easy but also any future servicing, and installation is complete.

The adaptable design allows use with a variety of application types.

Product Number – 15.585.200
